Docket No.: PALM-3506

### AMENDMENT

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of Claims:

1. (currently amended) A method of managing phone calls initiated from a ~~phone~~ computing device ~~of a personal digital assistant~~, the method comprising:

~~receiving a call signal to initiate a call device;~~

~~initiating the call device in response to the call signal;~~

~~displaying a selectable interface of the call device in response to the call signal,~~

~~wherein the selectable interface is configured to substantially emulate a dial pad of a handheld touch-tone phone;~~

receiving a dial signal from a call initiation button of ~~the~~ a selectable interface of the computing device to initiate a phone call;

determining whether digits were received from the selectable interface just before the dial signal was received from the call initiation button; and

initiating the phone call in response to the dial signal, wherein the phone call is placed to a last entered phone number if digits were not received just before the dial signal was received from the call initiation button.

2. (currently amended) The method of Claim 1, wherein the call signal is received from a hard button of the computing device ~~personal digital assistant~~.

3. (Previously Presented) The method of Claim 1, wherein the call initiation button is a talk button icon.

Application/Control Number: 09/675,406  
Art Unit: 2173

Docket No.: PALM-3506

4. (currently amended) The method of Claim 1, further comprising suspending a current application, wherein the current application is unrelated to calling is other than the call device.
5. (Original) The method of Claim 1, wherein the phone call is associated with a redialed phone number of a most recent phone call.
6. (currently amended) The method of Claim 1, further comprising:
- receiving a phone number for the phone call; and
  - searching a memory of the ~~personal digital assistant~~ computing device for a name associated with the phone number.
7. (Original) The method of Claim 1, further comprising:
- establishing a connection with another phone device; and
  - initiating a timer configured to clock a duration of the connection with the other phone device.
8. (Original) The method of Claim 1, further comprising:
- receiving a phone number for the phone call;
  - receiving a save signal to save the phone number; and
  - initiating an address entry application in response to receiving the save signal.
9. (Original) The method of Claim 7, further comprising:
- receiving an ended connection signal; and
  - initiating a lapse time routine in response to receiving the ended connection signal.

Application/Control Number: 09/675,406  
Art Unit: 2173

Docket No.: PALM-3506

10. (Previously Presented) A portable computing device having a phone capability and a display ~~computer system for managing a phone call, the system, the computing device~~ comprising:

~~a personal digital assistant including:~~

~~a display device;~~

~~a phone device;~~

~~a call device configured to control the phone device and to display a selectable interface on the display device, wherein the a selectable interface associated with the display and is configured to substantially emulate a dial pad of a handheld touch tone phone; and~~

~~a hard button configured to initiate the call device; and~~

a selection mechanism configured to receive user selections from the selectable interface, wherein the selectable interface includes a call initiation button, ~~wherein upon activation of the call initiation button is configured to initiate that, when activated, initiates a~~ phone call to a last entered phone number if digits were not received just before the call initiation button is activated.

11. (currently amended) The portable computing device ~~computer system~~ of Claim 10, wherein the ~~personal digital assistant~~ computing device is further configured to control phone calls placed and received by the computing device ~~phone device~~ according to the user selections.

12. (currently amended) The portable computing device ~~computer system~~ of Claim 10, wherein the display ~~device~~ is a touch-sensitive screen, and wherein the selection mechanism includes a tap recognizer configured to identify a tap input from a user.

Application/Control Number: 09/675,406  
Art Unit: 2173

Docket No.: PALM-3506

13. (currently amended) The portable computing device ~~computer system~~ of Claim 10, wherein activation of the call initiation ~~the hard button is further configured to suspend~~ suspends a current application.

14. (currently amended) The portable computing device ~~computer system~~ of Claim 12, wherein the tap recognizer is further configured to initiate a phone call in response to identifying the tap input.

15. (currently amended) The portable computing device ~~computer system~~ of Claim 12, wherein the tap recognizer is further configured to initiate an address entry application in response to identifying the tap input.

16. (currently amended) The portable computing device ~~computer system~~ of Claim 12, further comprising a microphone connected to the computing device ~~personal digital assistant~~, the microphone being configured to receive audio input from a user of the portable computing device ~~computer system~~, wherein the tap recognizer is further configured to deactivate the microphone in response to identifying the tap input.

17. (currently amended) A computer-readable medium carrying one or more sequences of one or more instructions for managing a phone call initiated from a computing device ~~phone device of a personal digital assistant~~, the one or more sequences of one or more instructions including instructions which, when executed by one or more processors, cause the one or more processors to perform the steps of:

~~receiving a call signal to initiate a call device;~~

~~initiating the call device in response to the call signal;~~

Application/Control Number: 09/675,406  
Art Unit: 2173

Docket No.: PALM-3506

displaying a selectable interface ~~of the call device~~ in response to the call signal,  
wherein the selectable interface ~~is configured to substantially emulate a dial pad of a~~  
~~handheld touch-tone phone;~~

receiving a dial signal from a call initiation button on the selectable interface to  
initiate a phone call;

determining whether digits were received from the selectable interface just before the  
dial signal was received from the call initiation button; and

initiating the phone call in response to the dial signal, wherein the phone call is placed  
to a last entered phone number if digits were not received just before the dial signal was  
received from the call initiation button.

18. (currently amended) The computer-readable medium as recited in Claim 17, wherein the  
call signal is received from a hard button of the computing device ~~personal digital assistant~~.

19. (Previously Presented) The computer-readable medium as recited in Claim 17, wherein  
the call initiation button is a talk button icon.

20. (currently amended) The computer-readable medium as recited in Claim 17, wherein the  
instructions further cause the processor to carry out the step of suspending a current  
application, wherein the current application is not a calling application ~~is other than the call~~  
~~device~~.

21. (Original) The computer-readable medium as recited in Claim 17, wherein the phone call  
is associated with a redialed phone number of a most recent phone call.

Application/Control Number: 09/675,406  
Art Unit: 2173

Docket No.: PALM-3506

22. (currently amended) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:

receiving a phone number for the phone call; and

searching a memory of the computing device ~~personal digital assistant~~ for a name associated with the phone number.

23. (Original) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:

establishing a connection with another phone device; and

initiating a timer configured to clock a duration of the connection with the other phone device.

24. (Original) The computer-readable medium as recited in Claim 17, wherein the instructions further cause the processor to carry out the steps of:

receiving a phone number for the phone call;

receiving a save signal to save the phone number; and

initiating an address entry application in response to receiving the save signal.

25. (Original) The computer-readable medium as recited in Claim 23, wherein the instructions further cause the processor to carry out the steps of:

receiving an ended connection signal; and

initiating a lapse time routine in response to receiving the ended connection signal.
